

# CLIMATE CAMPUS

Towards a climate-adaptive delta.

## Knowledge and innovation network for climate-proof deltas

The Climate Campus is a valuable knowledge and innovation network for climate-adaptive deltas. This campus is a unified effort of more than forty organisations with the joint ambition to set up an international testing ground for climate adaptation, starting in the IJssel-Vechtdelta region. The initiators are committed to the implementation and acceleration of climate adaptation in connection with social transitions such as energy, food and health, and smart . Together with the community - inhabitants, institutions and companies – the initiators develop regions into urban and rural areas that are climate-proof and have a high quality of life and a strong economy.

Climate Campus is a foundation with a board representing education, research, government, entrepreneurs and 'bottom-up' input.

### CLUSTER

Cluster of professionals with knowledge and services to realise climate-proof deltas

The Climate Campus promotes projects and programmes in the [demonstration delta] IJssel-Vecht delta and across the region. It stimulates innovations, start-ups, exemplary projects, research, training and education for climate adaptation.

### COMMUNITY

Community of 'end users', residents, housing corporations, healthcare institutions, companies and anyone with questions about climate-proof housing, work, development, entrepreneurship.

The Climate Campus has Spoorzone Zwolle as its home base, an urban development area for climate adaptation.

### Excel in climate adaptation by excelling in implementation power
